

XRAY RX8

TECH TIP: ENGINE HOLES ENLARGEMENT

Most popular engines have a 37.8mm distance between mounting holes.

However some engines (for example, Picco) have a smaller distance (37mm). If your engine has the smaller distance between mounting holes, you need to enlarge the mounting holes (for example, make each hole $\phi 0.2 \sim 0.4\text{mm}$ larger) to allow the engine to fit the engine mounts properly.
