**#30986 LIPO BALANCING CHASSIS WEIGHTS**

**T2'009 | T2'008 | T2R PRO**

The LiPo Balancing Chassis Weight set is designed to fit only the 6-cell chassis of the T2'009, T2'008 and T2R PRO.

Due to the light weight of LiPo batteries, you may find your car imbalanced. Using these chassis weights will help to balance the left and right sides of the car. The weights are placed in the center of the chassis to keep the weight centralized for better reaction and roll. Batteries are moved outward so they can be more easily inserted, and aluminium holders prevent the batteries from coming out.

For precision balancing, use the #107880 HUDY Chassis Balancing Tool.

We recommend using  
#107870  
(HUDY Fibre Tape)
