

TECH TIP for aluminum steering blocks V2 (352256 & 352266)

The new Alu Steering Block V2 is 1mm narrower than the composite steering block (352252 & 352262). To get the same offset, use the #355251 Alu Wheel Axle Offset +1mm.

NOTE:

For Aluminum Steering Blocks V2 (352256 & 352266) and for the 5° Kingpin Steering Blocks (352257 & 352267). All wheels have different-sized ribs on the inside of the wheel. When using some wheels with larger ribs, those ribs may contact the suspension arm when the wheels are turned to full steer. In this case, we recommend using the following to prevent the ribs from touching the arm (depending on the wheel used):

- a.. #335251 Alu Wheel Axle Offset +1mm
- b.. #335252 Alu Wheel Axle Offset +2mm
- c.. #335253 Alu Wheel Axle Offset +3mm
