

XRAY RX8

#343401 REAR ADJUSTABLE ANTI-ROLL BAR - SET

The optional adjustable rear anti-roll bar set includes 2 adjustable blades that may be turned to various angles (same angle for each blade) to increase or decrease rear roll. A setscrew secures each blade so it does not move.

To adjust a blade: Loosen setscrew, turn blade to appropriate angle, tighten setscrew. Repeat for other blade, making sure that both blades are at the same angle.

SOFTEST rear anti-roll bar setting (most rear roll): Set both blades to 0° (horizontal).

HARDEST rear anti-roll bar setting (least rear roll): Set both blades to 90° (vertical).
