## #375002 XRAY SOLID AXLE 1/10 PAN CAR-SET

For the new X10'22, the shim thickness must be changed. Currently, for a ball diff, a 1mm shim is placed on one side and a 6mm shim on the other side. For a solid axle, you must take the 1mm shim off and use the shims you have in the bag for the solid axle. The 6mm shim stays on the other side. This will result in the same rear axle width from the center of the car.

The following spur gears fit the X10 Solid Axle:
