

## NOVAROSSİ ENGINE MOUNTING TECH TIP

---

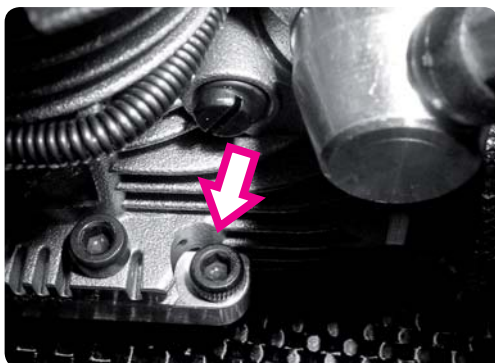

The engine mounts on some of the Novarossi engines may not fit perfectly on the NT1 engine mounts.

Follow this handy tech tip to carefully remove material from the engine mount tabs (on the engine crankcase) to allow the engine to fit properly.

Use a file or mototool to carefully remove material from the front of the engine mounting tabs as shown. Perform for both engine mounting tabs. Use appropriate safety equipment and eyewear.

Remove only enough material so the screws of the engine mounts do not touch the crankcase mounting tabs as shown.
